Experience

Scaler AI Labs **July 2026 – Present**

Member of Technical Staff Intern *Bangalore, India*

- Curated **repository-scale Reinforcement Learning environments** for autonomous coding agents by sourcing real-world engineering tasks — bug fixes, feature work, and multi-file refactors — across a wide range of open-source codebases.
- Wrote reference solution patches and built automated evaluation harnesses with **adversarial, rubric-driven test suites** that score agent behavior and shut down reward hacking and hardcoded shortcuts.
- Developed **modular, production-grade full-stack tools** that plugged into internal pipelines supporting large-scale AI model training infrastructure.

Projects

MockForge — Interview Simulation Platform

Tech: React, Express, MongoDB, Judge0 CE

- Designed a MERN platform supporting MCQ and coding rounds via a polymorphic Mongoose schema with an answer-key sanitization layer that strips correct answers and hidden tests before responses reach the client.
- Engineered a service-layer abstraction over Judge0 CE for sandboxed execution (Python, JS, C++, Java) with parallel test-case evaluation and hidden-test partial credit.
- Added JWT auth, bcrypt, role-based middleware, and a MongoDB aggregation leaderboard.

DocuMind AI — RAG Document Chatbot

Tech: Next.js, Google Gemini, Supabase pgvector, LangChain

- Built a retrieval-augmented generation pipeline that chunks uploaded PDFs, generates vector embeddings, and answers questions through semantic retrieval grounded in the source document.
- Tuned recursive character splitting (1000-char chunks, 150 overlap, paragraph-first separators) and tagged each chunk with page and source metadata to power inline citations.
- Enforced answer grounding so every response cites page-numbered passages and **refuses to answer when the source lacks the information**, preventing hallucination.

Mimeo CLI — Agentic Coding Agent

Tech: Node.js, LLM APIs (OpenRouter / OpenAI / Gemini)

- Built a conversational terminal coding agent driven by a structured **START → THINK → TOOL → OBSERVE → OUTPUT** reasoning loop that turns natural-language website descriptions into working HTML, CSS, and JavaScript.
- Designed a provider-agnostic LLM layer via a unified OpenAI-compatible config, enabling model switching through environment variables with **zero code changes**.

Education

Scaler School of Technology **Aug 2024 – Jul 2028**

Undergraduate Program in Computer Science *Bangalore, India*

- CGR: **8.43**

Birla Institute of Technology (BITS) **Aug 2024 – Jul 2027**

B.Sc. (Hons.) in Computer Science *India*

- CGPA: **8.45**

Technical Skills

Languages	Java, JavaScript, Python, C++, Go, Swift
Frameworks	Node.js, Express, React, Next.js, Spring Boot, SwiftUI
AI & LLM	RAG pipelines, agentic reasoning loops, LLM integration (Gemini, OpenRouter), vector embeddings, LangChain
Databases	MongoDB, PostgreSQL, MySQL, Supabase (pgvector)
Tools	Git, GitHub, Linux, REST APIs, Vercel
Core Concepts	Data Structures & Algorithms, OOP, System Design

Achievements

- **Competitive Programming:** Solved **700+** Data Structures & Algorithms problems across Codeforces, LeetCode, and GeeksforGeeks; strong in dynamic programming, graphs, trees, binary search, and recursion.
- **Table Tennis:** State-level competitive player and multiple-time tournament champion.

Volunteering

Sports Club, Scaler School of Technology

Core Member *Bangalore, India*

- Organized and coordinated multiple sporting events and tournaments, strengthening leadership, communication, and event-management skills.
